Q: Visual Studio (v10.0) + SQL Server 2008 Express. The connection is not recognized I have Visual Studio 2010 installed on my PC, connected with SQL Server 2008 express and now I'd like to execute INSERT command, but I get a message about not being able to establish the connection. I checked the connection string and it looks fine (as far as I understand). Also I tried to connect to the database in Management Studio (as Administrator) and I could successfully do this. Any ideas why this is happening and what should I do? A: From your comment it appears that you are trying to run the local version of your application on your development PC against a remote SQL Server instance. If that is correct then the connection string you have given is not valid for a SQL Server instance. To get round this problem you need to set the connection string to use a specific named SQL Server (it doesn't need to be SQL Server Express). To do this open the SQL Server Configuration Manager. This will open up a dialog with which you can select the SQL Server instance to use. For information on how to access the SQL Server Configuration Manager see here. 1. Field of the Invention The present invention relates to an antenna. More specifically, the present invention relates to a small-size planar inverted F antenna (PIFA). 2. Description of the Related Art With development of wireless communication technologies, portable electronic products are becoming smaller in size. In this regard, various electronic products are designed with high-frequency antenna structures, such as small-size PIFAs, for use as antennas. FIG. 1 is a schematic drawing showing a PIFA in accordance with the prior art. As shown in FIG. 1, a PIFA 100 according to the prior art includes a planar radiating element 110, a grounding conductor 140 and an insulating member 120. The planar radiating element 110 has two opposite ends 120a and 120b. The insulating member 120 includes two connecting portions 122a and 122b. The grounding conductor 140 includes a side 140a and a bottom 140b. In the PIFA 100, the connecting portions 122a and 122b of the insulating member 120 are electrically coupled with the bottom 140b of the grounding conductor 140. In this case, the bottom 140b of the grounding conductor 140 is a common ground. Therefore, the PIFA 100 can function as a planar inverted F
