Let's get started! Quickly create QR codes with the qikQR app. QikQR lets you scan the QR codes you create on your desktop with your smart phone. This may sound a bit unusual, but it is actually a very useful way of instantly sharing info. QikQR features: ✓ Create QR codes in a wide range of formats. ✓ Add text or logos to your QR codes. ✓ QR codes to your desktop, windows, files, email, facebook, twitter. ✓ QR codes to text, images, html, zip, doc, excel, pdf. ✓ QR codes to website. ✓ Make sure to make QR codes for large volumes, so you will get a discount! Want to use? (Windows, Linux) By kmehdi Published on Nov 26, 2016

Organic granular activated carbon for environmental remediation: a review. With increasing interest in sustainable development and environmental protection, some new methods, materials and technologies have been developed and utilized for environmental remediation. Since the 1990s, many studies have focused on the utilizations of various kinds of granular activated carbons (GACs) for remediation of water, soil and air. GACs generally have the following features: (i) a porous structure, (ii) a high surface area, (iii) a higher amount of active sites, (iv) lower density and (v) a stable chemical structure, which can be functionalized and/or modified in the porous structure. The application of GACs in water remediation mainly includes the use of GACs alone or as carriers for other remediation technologies such as chemical coagulation, flocculation, and photocatalytic degradation. In the remediation of soil and air, GACs usually are used as adsorbents, which can be combined with technologies such as bioremediation, in situ precipitation and biodegradation. Although GACs have the potential for applications in the field of environmental remediation, there are still some issues that should be considered, which are such as the cost, stability, and recyclability. Thus, this paper provides an overview of the latest developments and recent advances in the field of environmental remediation using GACs and offers some perspectives on future directions for research. package net.ripe.db

What's New in the QikQR?

A new day, a new challenge. Game Masters are, once again, coming to slay you in your sleep. "Trick or Treat" is a hilarious, magic-filled card game for 2-5 players set in the world of the Pathfinder Playtest. Your goal is to go Trick-or-Treating, collect all the candy, and complete the candy-map, all while challenging your opponents to beat your score and successfully defeat you. You must play each round against a single opponent and each opponent takes turns with you. Each round plays out like a game of cards, except that your cards have multiple actions and effects, and you can use a special trick deck to perform magical effects in the game. The end of each round has a special ending condition, and each player wins or loses based on how they fulfill the ending condition. Game Masters: At its heart, Trick or Treat is a social game about collaboration, competition, and making friends. Each game is a special, magical event in a group of friends, and you never know what cards the GM will play. The trick is to look at your hand of cards, understand what your opponent is up to, and try to figure out how you can beat them. The goal is to win by getting the highest number of candies in each round and collect all the candy maps. Features: Gameplay: Play as a single player or as a 2-5 player game. Take turns against a single opponent and then play again against your opponent. Cards provide a variety of special effects and players can use trick cards to alter the board, add candy, and fulfill special conditions. Map Cards: Track how you got your candy and create a map of candy maps! Completion Bonus: Win by getting the highest number of candy in each round and collect all the candy maps. Winner: Successfully defeat your opponent and be the first to complete the candy map. Description: Favored Class is a system designed to maximize the efficiency of a group of adventurers of the same class. If one character has a favored class he or she can request to be given special benefits to help his or her class, although these benefits are limited by the number of favored classes available to characters. Favored classes can be requested from the GM at the table to overcome any disadvantages experienced by the character (or NPC). Favored Classes: Since favored classes are not a class specific power, they can be granted to a character that needs them regardless of class. Benefits: Even if you do not have a favored class, you can request one to be given to you and make your character as efficient as possible. The Benefits table lists benefits that you can request from the GM. Some are specific to the character class. Examples: Athletics: Auto Dodge: Characters can request a

System Requirements:

Intel Dual Core i5 or equivalent Windows 7, 8, or 10 3 GB RAM 2 GB VRAM DirectX 10.0 3 GHz Processor 2 GHz Ram 2 HDDs or 1 SSD and 1 HDD 1024x768 or better resolution and 60FPS minimum Connection to the Internet Updates: Updated the game to be compatible with most modern Intel processors. It is still recommended to stick with Dual Core instead of Quad Core or higher processors, since many game engines are
