The Elecard AVC HD Player supports high definition (HD) video at 1900x1080 at 25,000kbps. It offers an innate AVC/H.264 support that proves very efficient while offering HD 1900x1080 at 25,000 kbps and 25 frames per second playback. The application supports multiple instances, but this perk should be used with care since HD playback takes its toll on the CPU. We recommend using it only while playing videos with a lower quality than Full HD. Besides offering AVCHD, MPEG-1, MPEG-2, MPEG-4 SP/ASP compatibility, Elecard AVC HD Player can easily run

some of the most common multimedia formats such as AVI, WAV, MP3 or MOV.

So you can use it as your default media player with no trouble at all. It works just like any other player, providing users with playlist options, bookmarks and history capability, user-defined seeking forward and backward options, brightness control and quarter resolution playback. Furthermore, Elecard AVC HD Player can easily be used to capture images from your videos. Simply choose the destination folder for the captions, select the file type and eventually the custom picture size, and that is it. Use the predefined hotkey and start grabbing the frames you are interested in. Besides video playback, the software can also offer detailed stream information in relation to the video sequence, system headers, audio sample headers or statistics from decoders and renders. 7-Zip 7-Zip is a file archiver, created by Igor Pavlov.
