You can also preview, edit and delete audio files. MIDI: The MIDI file format is a music file format that defines a note message, called a "note on" or "note off", together with an envelope that can be used to control a synthesizer. The MIDI file format was defined by the International Standards Organization in 1983 and first appeared in real synthesizers as part of the Yamaha Disklavier system in 1987. MIDI files are increasingly used for representation of music and musical sound synthesis. Sampling midiMusic for PCM support The following is a list of midi note numbers as defined by the MIDI standard. *when changing any of these midi number, you will need to re-load the track. Note on/off - Pressing the note on key will bring up the note and dampen the keys other than the selected note. Pressing the note on key again will delete the note, preventing it from triggering notes or moving the keys. Note on/off is available for all notes in the midi file. Note velocity - Pressing the key harder will raise the velocity. (velocity is how hard the key is pressed) Velocity 2 - Pressing velocity 2 will raise the velocity even higher than pressing the key hard. All velocity control has been added for the piano keys. Any notes with no velocity on it will not respond to note on/off. Note Repeat A repeat control, when enabled, will allow the user to hold down a note, and when the user releases the note, the note will play for the amount of
